	Claims		NO
Inventive step (IS)	Claims	<u>1-17</u>	YES
	Claims		NO
Industrial applicability (IA)	Claims	<u>1-17</u>	YES

2. Citations and explanations (Rule 70.7)

The claimed invention relates to a system and method allowing a moving user terminal to simultaneously access a plurality of access networks which may have different network technologies. The problem to be solved by the claimed invention concerns the necessary modifications and adaptations to be made to a network access selector when a new access technology is introduced on the network.

The object of the claimed invention is thus to provide a system and method for access selection which is independent on the technology used in the access networks.

Documents cited in the International Search Report:

D1: WO 0230133 A2

D2: WO 0135585 A1

D3: EP 1091528

The cited documents represent the general state of the art.

The invention defined in claims 1-17 is not disclosed by any of these documents.

The cited prior art does not give any indication that would lead a person skilled in the art to claimed system and method for access selection which is independent on the technology used in the access networks by receiving access dependent information from access networks and mapping this information on access independent status information; and based on the status information and QoS (Quality of Service) parameters required by an application, selecting an radio access network. Therefore, the claimed invention is not obvious to a person skilled in the art.

Accordingly, the invention defined in claims 1-17 is novel and is considered to involve an inventive step. The invention is industrially applicable.
